

CHAPTER 8

MORE COMPLICATED ELEMENTS OF FEED LINES

Any sufficiently advanced technology is indistinguishable from magic.

Arthur Clarke's third law

Chapter Contents

Introduction	385		
8.1 IN-LINE RESONATORS	385	8.3.6	Butler Matrix (Beam Forming Network) 408
8.1.1 Outline	385	8.3.7	Monopulse Concept 409
8.1.2 Basics of In-line Resonator. Bounce Diagram	385	8.3.8	Radar Receiver Protection 411
8.2 DIRECTIONAL COUPLERS AND HYBRIDS	388	8.3.9	Frequency Multiplexer 414
8.2.1 Introduction	388	8.4 ANALOGUE FILTERS	415
8.2.2 WR Discrete Directional Coupler	389	8.4.1 Overview	415
8.2.3 Continuous Directional Coupler	391	8.4.2 Normalized Low-pass Filter. Frequency Transformation	416
8.2.4 WR Hybrids	394	8.4.3 Filter Phase Characteristics. Time Delay	418
8.2.5 WR Ring Hybrid	396	8.4.4 K - and J - Immittance Inverters	421
8.2.6 WR Short-Slot Hybrid (Riblet Hybrid)	398	8.4.5 Quarter-Wavelength Section of Feed Line as Inverter	422
8.2.7 Microstrip Branch Hybrid	400	8.4.6 Filters with Direct-Coupled Resonators	423
8.2.8 Microstrip Ring Hybrid	402	8.4.7 Coupled Line and Distributed Filters	424
8.2.9 Wilkinson Power Divider	404	8.4.8 Comblines and Interdigital Filters	426
8.3 DIRECTIONAL COUPLER AND HYBRID APPLICATIONS	405	8.4.9 Evanescent-Mode Filters	428
8.3.1 Signal Flow Measurements	405	8.4.10 Surface Acoustic Wave (SAW) Filters	428
8.3.2 Calibration and Test Units	406	8.4.11 Filter Selection Trade-off	432
8.3.3 Power Leveling	406	8.4.12 Optical Filters	432
8.3.4 Distributed Antenna System (DAS)	407	REFERENCE	437
8.3.5 Power Combiner/Splitter Networks	408
